Re: Jason Yaeger father of Jayci Yaeger, age 9 Date of Birth: 12/23/1997

Mr. Yaeger's daughter Jayci was diagnosed with central Neuroblastoma, a malignant cancer in the brain, in May of 2001. She has experienced three relapses. Her most recent relapse was in April of 2007. Jayci's scan on 7/10/07 revealed that her tumor is growing in spite of all treatments administered over the last six years.

Jayci's mother has taken the child to Chicago where she has been on a pediatric cancer treatment for relapsed neuroblastoma. In September, it was determined that Jayci's tumor is advancing even while she was on the relapse treatment.

Jayci has now returned to Omaha and was hospitalized on September 29th for symptoms of pain, weakness on one side, speech impairment and lethargy. There is little in the way of treatment that can be offered. Any therapy given at this time would be intended to give only symptomatic relief.

We are requesting that the court considered granting Jayci's father, Jason Yaeger a visit with Jayci while she is still well enough to know that he is present. Thank you for your thoughtful consideration of this matter.

Sincerely,

June McAtee, LCSW
Social Worker

Minnie Abromowitch, MD
Hematologist Oncologist
